## **BİLİME EN ÖNEMLİ KATKISI**

Günümüze değin testisin inişini açıklamak üzere ileri sürülen tüm teorilerden farklı olan açıklamaları, testisin inişi, inmemiş testis, çıkan tesis, fitik ve hidrosel ile inmemiş testiste fertilité azalması ve malignansi riski artmasını konularını birbirleriyle ilişkilendirebilen tek teoridir. Proessus vaginalis etrafında düz kas geliştiğini, testisin bu düz kasların peristaltik hareketleri ile indirildiğini, testis indirildikten sonra proessus vaginalisin kapanması için bu düz kasın programlı hücre ölümü ile kaybolması gerektiğini ileri sürmektedir. Zamanından önce gelişen programlı hücre ölümünün düz kası azaltarak testisin inişini engellediğini, zamanında gelişmeyen programlı hücre ölümünün düz kasın varlığını sürdürmesiyle fitiğe, yetersiz hücre ölümünün ise hidrosele neden olduğunu ileri sürmektedir.
